

Maximum Results Minimum Cost

This Canadian road was treated with *Maximum Salt* while the air temperature was 3° F and the road temperature was 10° F. No hardpack or ice can bond with the road. Refreezing is stopped; safety is greatly improved.

The *Maximum Salt* mill blends the De-Ice-55 onto the salt uniformly. *Maximum Salt* is the most advanced material on the market. *Maximum Salt* saves time and money while increasing safety.

Maximum Salt is processed and delivered by Klink Trucking. A fleet of 45 modern quad-axles will ensure timely delivery when you need *Maximum Salt*.

Do you believe winter road crews could finish faster and more efficiently if your material worked longer and at lower temperatures? Can roadways be safer while using a material that reduces corrosion? Can a single change in your winter program make a measurable impact on your reputation of providing safety and service?

Maximum Salt is the material you've been looking for with the advantages that make a difference. *Maximum Salt* is less corrosive than rock salt, eliminates bonding of ice and hardpack and, because you reduce harmful chlorides, you greatly reduce overall corrosion to your equipment, infrastructure and private assets. A longer dilution time means it works longer and at lower temperatures, and that saves costly reapplications. All this adds up to reducing the amount of salt or grit applied per lane mile while improving the level of service and increasing savings.

Maximum Salt is the most advanced technology available for dealing with winter headaches. You've squeezed every minute out of your crew and every penny out of your budget. Now make the most of your material with *Maximum Salt*.

The *Maximum Salt* Advantage

Maximum Salt Specs

Application Amount.....	Up to 40% less per lane mile
Bounce and Scatter.....	Reduced 40-60%
Low Temp Effectiveness.....	Works at up to 25° F
Clumping/Freezing.....	Reduced
Environmental Protection.....	Complies with Storm Water Acts
Effective Application Rate.....	250lbs per lane mile
Corrosion of Metal.....	Reduced up to 70%
Working Time.....	Up to 30% faster than rock salt
Labor Cost.....	Reduced
Infrastructure Protection.....	Increased
Delivery.....	Available Indiana/Ohio/Michigan
