

MX-86 Sheep Fescue

FEATURES:

- Unsurpassed resistance to drought and neglect
- Hardiness even in dense shade
- A deep, rich blue-green leaf color
- Requires little maintenance

PERFORMANCE CHARACTERISTICS:

- **WATER CONSERVATION:** No cool-season turfgrass outperforms **MX-86** in drought tolerance and low water use. Researchers at Colorado State University even rank it alongside the best water-conserving warm-season species in low water use.
- **BEAUTIFUL BLUE-GREEN COLOR:** **MX-86** is one of the darkest green fine fescues on the market today, according to national tests.
- **OUTSTANDING RUGGEDNESS:** This TOUGH turf-type fescue is great for golf course fairways or roughs or for shady lawns—even in high erosion areas. **MX-86** is a grass that looks good and requires very little maintenance.
- **NOW WITH ENDOPHYTE ENHANCEMENT:** **MX-86** is the new endophyte-enhanced version of the original **MX-86**, making it the world's first sheep fescue variety with endophyte. Endophyte is a natural biological system for insect control.
- **LOW GROWTH PROFILE:** **MX-86** is one of the few turfgrasses that can even be grown without mowing! Its low growth profile seldom exceeds ankle height. With a once-a-year trim mowing of the seedheads in late spring, it provides the closest thing to a no-mow lawn.

DISEASE TOLERANCE:

- | | |
|----------------|----------------------|
| • Anthracnose | Good resistance |
| • Dollar spot | Very good resistance |
| • Leaf spot | Very good resistance |
| • Pink patch | Very good resistance |
| • Red thread | Excellent resistance |
| • Summer patch | Excellent resistance |

DEVELOPMENT:

MX-86 is an improved Green Seal Quality variety developed by breeders at Jacklin Seed. Green Seal products are painstakingly developed for superior genetic characteristics and meet higher quality standards than certified seed.
