

# Quest (Turf Type) Tall Fescue

**Quest** is our next step in the breeding of high quality, dark green, deep-rooted tall fescues. It was selected for its resistance to brown patch, net blotch, and *Microdochium* patch. **Quest's** density, disease resistance, and durability make it a perfect choice for home lawns, sports fields, parks, and golf course roughs.

## FEATURES:

- Takes the heat and humidity of the Transition zone
- Dark green color
- Excellent spring green up
- Proven performance in Ohio, Maryland and New Jersey
- Deep root system for added drought stress tolerance

## PERFORMANCE CHARACTERISTICS:

- Great net blotch resistance
- Outstanding brown patch resistance
- Excellent *Microdochium* patch resistance
- For use in sun or partial shade
- Rapid germination leads to quick establishment

## DEVELOPMENT:

**Quest** began in 1997 as a synthetic breeder block in Post Falls, Idaho. The breeder block was composed of 4,000 plants representing ten experimental lines. Each line was selected for brown patch and net blotch resistance from our Maryland trials. Out of the breeder field, the top 2,500 plants were selected based on leaf texture, color, plant density and plant height. Breeder seed was harvested in 1998.
