### Product Description:

An ideal potting soil for all sizes of containers, planters and hanging baskets. This blend, notably absent of perlite, allows for a natural look and provides ease of clean up when used onsite. A versatile mix - it can also be used as a soil amendment or mulch. It has been blended for nitrogen stability with bluechip and contains controlled release fertilizer for season long nutrient support. Use of variable gradations of pine, peat and coir allow for an excellent balance of water retention and drainage.
