PHYDURA™

Active Ingredients:

Citric Acid.....	20.0%
Clove Oil.....	15.0%
Malic Acid.....	10.0%

Other:

Lactose, Potassium Oleate, and water.....	55.0%
Total.....	100.0%

DIRECTIONS FOR USE:

SHAKE WELL BEFORE USING

PHYDURA is a foliar active weed control product which contains clove oil and natural acids as the active ingredients. It is non-selective to both broadleaf and grassy weeds and is recommended for areas such as borders, driveways, sidewalks, around mature tree bases, around buildings, in fence rows, in greenhouses, on school grounds, and around flower beds. PHYDURA is fast acting. Foliar contact results in rapid control of annual weeds and grasses, and top growth reduction of herbaceous perennial weeds and grasses. Re-treatment is required for control of established perennial weeds. Do NOT let Phydura spray contact any painted surfaces as it may discolor or strip the paint.

APPLICATION / DILUTION / DOSAGE

Young, Smaller Weeds: Mix PHYDURA with water at 3:1 (3 parts water to one part PHYDURA) ratio. Fill sprayer 1/2 full with water. Add PHYDURA and then fill the sprayer with water. Spray apply diluted product to top and bottom of all weed foliage. For best control, spray PHYDURA in full sunlight at the warmest part of the day.

Older Large Weeds: Mix PHYDURA with water at 2:1 ratio. Spray apply to top and bottom of all foliage. PHYDURA works best in non-shaded areas when temperatures are above 60°F. Spray PHYDURA directly on weeds until wet, but not to the point of run-off. Some agitation of the spray mixture during application is recommended. Repeat applications as needed. Children and pets may re-enter treated areas after the spray has dried.

NOTE: All contacted vegetation will be affected. Avoid contact with desirable plants. Overspray or drift will injure or kill contacted vegetation. When using Phydura in a greenhouse or other enclosure, turn off all fans and/or ventilation systems so that the spray mist does not become airborne and injure any non-target plants.
