3-hours after  
Spraying

## Nothing Works Faster!

**PHYDURA** is an all new, contact herbicide made from ingredients found in nature--clove oil and citric acid for nonselective control of herbaceous broadleaf and grass weeds. Unwanted vegetation begins to wither and die within hours, with complete burndown in 24 hours or less. For best results, spray Phydura in direct sun during the warmest part of the day. Children, workers, and pets can safely enter areas treated with Phydura right after spraying!

### PHYDURA controls many plants including:

Algae & Moss	Mustard	Cocklebur	Tufted Vetch	<b>Poisonous Plants</b>
Burdock	Leafy Spurge	Oxalis	Curled Dock	Castor Bean
Chickweed	Wild Carrot	Pigweed	Crotalaria	Poison Hemlock
Black Medic	Ryegrass	Velvetleaf	Quackgrass	Poison Ivy
Dandelion	Toadflax	Ragweed	Ivy Leaf	Japanese Knotweed
Clover	Rough Cinquefoil	Silver Cinquefoil	Garlic Mustard	Black Night Shade
Bluegrass	Chrysanthamum (weed)	Fleabane		
Crabgrass	Henbit	Morning Glory		

**Spot Treatment**—Use single nozzle, backpack, or pump action sprayer to burn out weeds in greenhouses, garden rows, under and around trees, shrubs, and berry bushes, along fence rows and walkways. Ideal for use where other weed killers cannot be used. Do not allow desirable foliage to be contacted. Phydura is a non-selective herbicide.

**PHYDURA is safe for use around lakes, ponds, streams, water wells, trees and shrubs.**

**Dosage:** Mix one part Phydura with three parts water. On cool or cloudy days, mix one part Phydura with two parts water to improve efficacy. Certain mature perennial weeds may require multiple applications to kill roots.

**"Our person applying the Phydura herbicide reviewed with me that he sees these results from the product:**

- Satisfactory overall herbicidal effects.
- Differential speed of response on different types of weeds - killing effect is slower on some weeds than on others - this is more variable than with glyphosate.
- Product odor is not offensive to the user, and it dissipates rapidly once it's sprayed onto an area of weeds.
- We see a fit for this product at sites that specify or are leaning toward use of organic products, and we'll be ordering more this season.

**Thanks for your interest and assistance to get Phydura into our inventory of control products."**
